Phase Technology Professional Technician Training Certificate Program

## The only factory-certified training program that is taught by Phase Technology scientists, technicians, and senior staff

### The Phase Technology Professional Technician Training Certificate Program

gives you a thorough understanding of current best practices in cold flow property testing, proper operation of analyzer instruments, and long-term maintenance procedures.

- Discover the full capabilities of your analyzer
- Get hands-on experience using test equipment
- Understand how to interpret and analyze results
- Learn how to correctly prepare test samples
- Find out the best ways to clean and maintain your equipment
- Gain a comprehensive understanding of the latest regulatory issues from ASTM and the Energy Institute (IP)
- Hear useful tips to improve testing techniques and performance
- Network with your peers and meet Phase Technology engineers

- Obtain official Phase Technology operator certification

### Who Should Attend?

- Laboratory Technicians
- Lab Managers, Test Engineers
- Corporate Trainers and Quality Assurance Managers
- Anyone responsible for test results and data integrity

### Practical Course Content

Your Phase Technology Professional Operator Training is structured to give you insight into the three components of test bias:

1. **Eliminating Technical Bias:**  
The payoff of precision

*Learn the background and development of automatic cold flow testing with no bias towards manual methods. Also; learn why ASTM and IP methods, written specifically for Phase Technology's analyzers, offer world-leading repeatability and reproducibility.*

2. **Eliminating Mechanical Bias:**  
Properly maintained and up-to-date test equipment

*Learn ways to best keep your Phase Technology analyzer at peak performance for years of continued reliability.*

3. **Eliminating Human Bias:** Freedom from operator-introduced error

*Hands-on training will teach you how to properly prepare samples, operate your analyzer and understand test results.*

### Gain Valuable Knowledge; Develop Expert Skills

The 2-day Phase Technology Professional Technician Training Certificate Program is offered to participants from companies that own Phase Technology analyzers.

Phase Technology provides meals and refreshments during the day sessions. Cost per participant is \$1800.

Class size is limited to 10 participants – reserve your space early!
